

**Amendments to the Specification:**

Please replace the paragraph on page 40 lines 1-6 with the following amended paragraph:

Fig. 36 is an isometric view of a hydraulic dampening device 314 connected with the rocker assembly 112. A pulley 316 is connected to the pivot axle 120 of the rocker. The hydraulic dampening device is connected to the pulley by way of a ~~belt 318~~ belt 318. The hydraulic dampening device may be of the type that employs an impeller within a chamber filled with hydraulic fluid. The dampening device is configured to impact a resistance on the reciprocation of the treadle by way of the rocker.
